

INTP

Your life's motto: “Ingenious problem solver”

Analyzes problems and develops innovative solutions. Understands complex systems, finds ways to eliminate errors and weakness. Likes being on cutting edge of innovation, smart, logical, good forecaster, inventor.

Your life's challenges:

Be better organized

Be patient with less intelligent people

Work and improve your social skills

You are especially satisfied with work that:

Lets me develop, analyze, and critique new ideas

Lets you focus your attention and energy on a creative and logical process rather than on the end product

Is challenging and deals with complex problems where you can try unconventional approaches and take risks

Lets you work independently with quiet time to concentrate

Lets you set and maintain your own high standards for your work

Is done in a flexible, unstructured environment without useless rules or excessive limitations

Lest you interact with a small group of highly regarded friends and associates

Gives you opportunities to constantly increase your personal competence and power and interact with other powerful and successful people

Lets you develop ingenious ideas and plans and delegate the implementation and follow-through to a support staff

Does not require you to spend time directly organizing or supervising other people

Some careers you may find particularly satisfying; this is not a full list of careers, just some possibilities.

Computer/Technology Industry
